

Tip 20: Coach teams on the Various Scrum Tools

Use Scrum Master tools to make your work easier

Show the amount of work remaining in a project

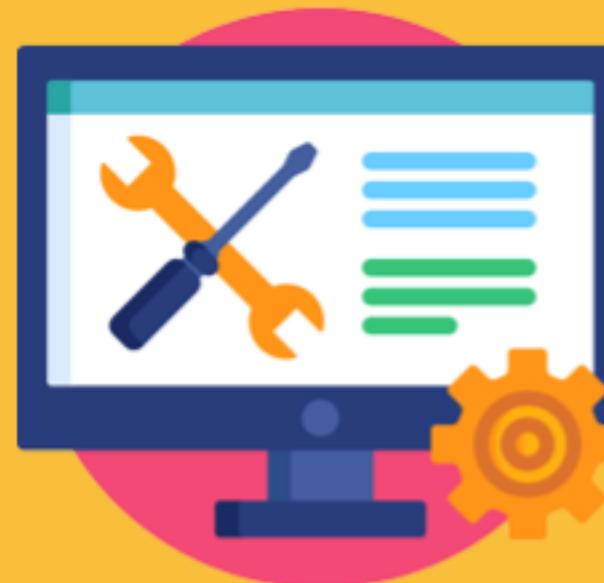

Tracks each team's progress per sprint

Where the team can be occupied in an exercise of setting up the backlog on the wall

**Have the company pay for
the use of these tools if
they will make the team
efficient**

Personally I love using Jira for the following reasons among others:

It allows us to manage a backlog effectively

Shows a realistic looking task board

Generates a burndown chart

It is user friendly once set up

In Summary

- Coach teams to use scrum tools to improve workflow and involve the team in using the ones that can improve their productivity.
- The various scrum tools are there to ease your work: use them at every possible opportunity ONLY if they improve productivity or add value for the developers.
- Several web-based scrum tools are now available; most of these serve one purpose: increase value and improve your work situation.
